PERSONAL PROFILE

I am a self-taught, self-sufficient, motivated Web Developer. I strive to deliver the best quality-, efficient- and modern code possible.

Attention to detail is my greatest professional concern, without it my work would just be average. I take great care in writing clean and readable, high quality code as the presentation of my work is the legacy which I leave.

My favourite part of the work is dealing with the UX, although every other part is just as important. I prioritise visual perfection and user friendliness – with a simple test to judge if it is good enough: Would I like working with it as an end user?

I feel at ease working in either a team environment or alone. Being a self-taught developer also means that I am at the stage in my career where I feel it necessary to "pay it forward" and help mentor junior developers.

I have more than ten years of experience in the software development industry and although I have no formal tertiary education, I believe that my practical experience has been an education of its own. This should stand me in good stead to complete any project successfully.

EXPERIENCE

Freelance Fullstack Developer

forgood.co.za | 2018 - Current

On the first day of March 2018 a new chapter in my life started when my family and I landed on US soil. My wife was transferred here since she is just that awesome.

After a 4 month wait to obtain my work permit (my wife already had hers, so I played daddy daycare in the interim), I started a position at onepager.com.
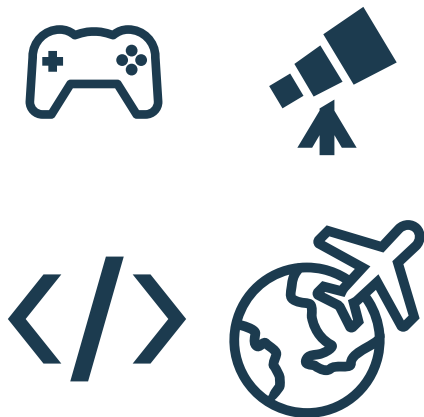

This is a remote contract position with the following responsibilities:

- Redesign/Rearchitect the current OnePager Live site. (Cloud version of OnePager's desktop product, still in development.)
- Enhancing current code/Add new features
- Ensure test coverage of any new features/bugs

Technologies involved are:

- .Net Core 2, WebApi 2, C#, VB.net
- React-Redux
- Sass
- Webpack, Babel

EXPERIENCE

Lead Developer

forgood.co.za | 2017 - 2018

- Run small, Agile, Dev Team
- Architect new features
- Implement new features / Help to migrate entire site site from MS MVC to modern SPA - Aurelia Frontend, C# WebAPI & Cosmos DB
- Mentor intermediate developer
- Recruitment of new developers
- Squash bugs
- Optimize websites for speed (ask Andy Hadfield about this)
- Optimize operation/running costs (again, ask Andy Hadfield about this)

Senior Developer

Investec | 2015 - 2017

- Research and implement new technologies to enhance code quality
- Team lead on a major Regulatory project
- Maintain 3rd party AML systems. (Nice Actimize)
- Lead and mentor 2 graduate/junior developers
- Lias and work closely together with the Operations team to perform as an effective unit in DevOps
- Implementation of most monitoring in our space so as to assist in predicting trends of possible failures and insuring minimal downtime

Senior Developer

First Tech Digital | 2014 - 2015

Sub contracting to work with numerous clients including:

- europcar.co.za (car booking module
- Stanlib (various internal systems)
- Tribe One/Sony Music (ticketing system)
- Investec (various internal systems)

Work done for the above mentioned companies involved mostly web development, but also a small amount of Windows and Ionic mobile development

Senior Developer

Contract Communicator | 2011 - 2014

Lead developer tasked with the ground up development of an enterprise grade solution to replace the outdated products

Responsible for the full development lifecycle.

Junior Web Developer

Various Companies | 2007 - 2011

These were my formative years as a web developer. Generally speaking, most jobs available at the time were for .net. As such I got to learn VB.Net, C# and SQL. I also worked extensively with Web Forms and once it became available, MVC.
